

## LOW PRESSURE TUBES

Due to the selection of high-quality materials used for production, Phillips low pressure tubes and air brake coils, are distinguished by high mechanical strength and chemical resistance. They are light, flexible, and resistant to damage, abrasion or work in difficult weather conditions.

## PNEUMATIC

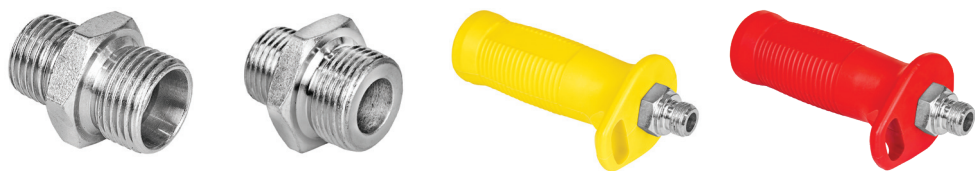

## AIR BRAKE COILS

Air is critically important for functioning of the braking system especially for trucks and trailers.

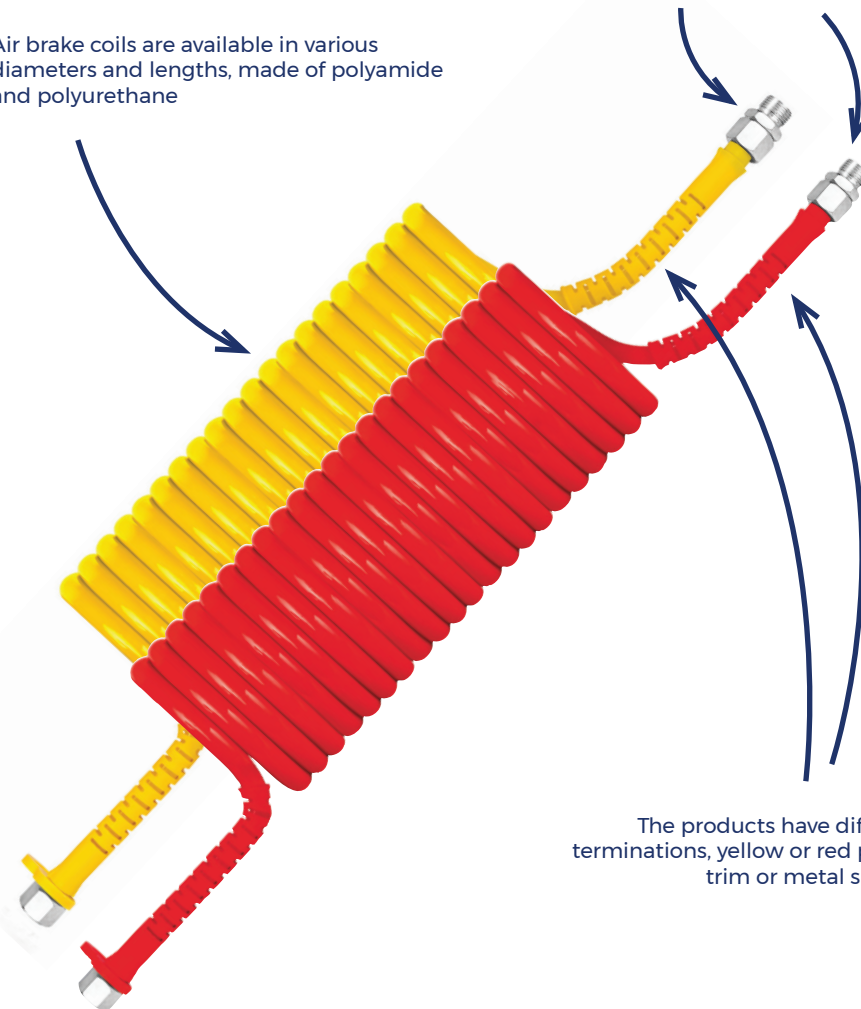

In large vehicles, such as trucks, tractors or buses, the braking system must stop huge masses, therefore such a system must be fully reliable.

Phillips specializes in the production of low pressure tubes and air brake coils manufactured in accordance with international norms and standards. We use only highly efficient and certified materials for production, which guarantees their durability, and numerous tests they are subjected to confirm their reliability.

Air brake coils are available in various diameters and lengths, made of polyamide and polyurethane

Reduction is available in 3 sizes

The products have different terminations, yellow or red plastic trim or metal springs
