DOGA is a family company founded in 1958 in Barcelona (Spain) by Antonio García Domingo. The company boasts more than 60 years of experience in the development and production of automotive components.

With affiliated companies in Italy, the USA, Mexico, Brazil, China and India, we export our products to more than 70 countries and operate in multiple markets, including family cars, industrial vehicles, buses, trains, agriculture and construction machinery, boats and motorcycles.

With premises covering an area of 2.300 m2 and a team of more than 60 people, at DOGA, we focus on the development of projects in our Technical Centre.

We boast extensive know-how in terms of the development and production of automobile components that are specially designed for OEM applications, and the execution of each project is given an individualised treatment and assigned a specialist team in order to achieve maximum performance. If our customers need it, our team of engineers also takes on the role of technological partner to obtain results that are specially designed and created to meet their specific requirements.

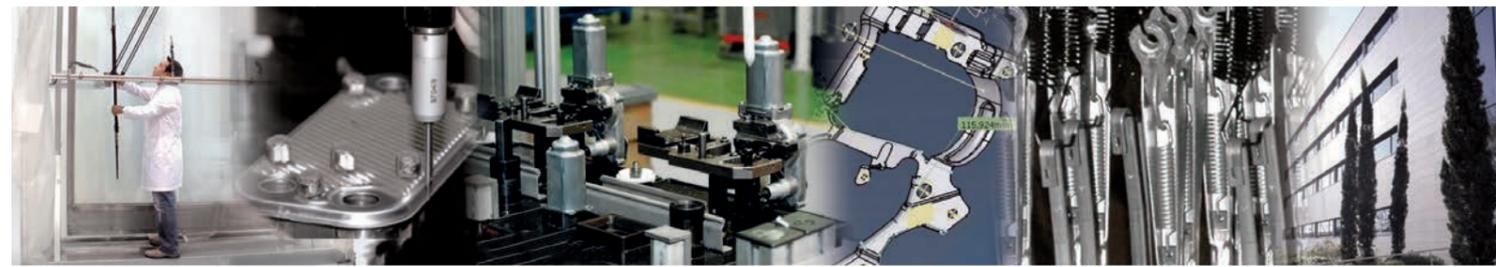

Our ability to offer our customers the best solution, regardless of the complexity of the project, is the result of the hard work and experience accomplished over our long history operating in the automotive sector. At DOGA, we strive to achieve the best results for the objectives set with our customers and, as a result, consolidate a relationship with them over the years based on trust and professionalism.
