Leader

in the production of exhaust systems and catalytic converters in the automotive aftermarket sector for over 65 years.

Imasaf has the ability to transform experiences and knowledge into a wealth of skills combined with passion.

Imasaf's performances are the result of a continuous and rigorous monitoring of tens of millions of pieces, assembled all over the world guaranteeing a high quality.

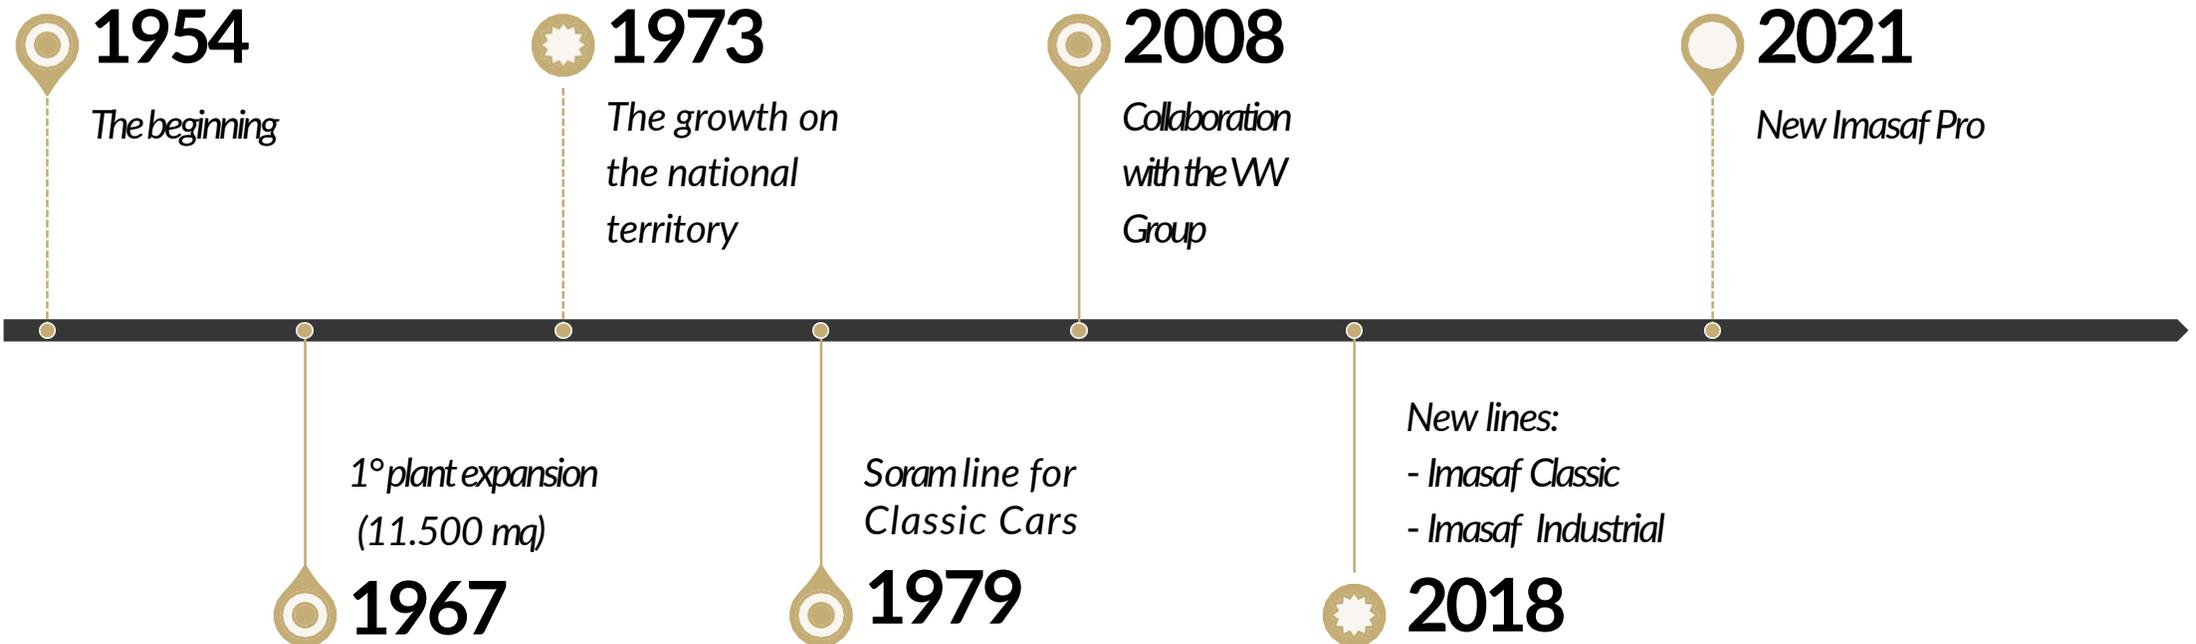

It was 1954

when the idea was born

Quality Networking

➤ **Unique manufacturing processes :**

1. **Suitability** for working and bending pipes with important diameters \varnothing from 20 mm to 130 mm and related bending radii;
 2. **Thicknesses** from 1.5 mm to 2 mm;
 3. **Customized** bending radii and \varnothing can be produced on request;
 4. **Thermoacoustic** insulation;
- **Supply** of accessories for the correct functioning of the product (flanges, clamps, brackets);
- **Bench and road testing;**
- **Personalized encoding** with specifications provided by the customer.
- **Storage** of material, equipment and products, located for short or long periods.
- **Customized** packaging with logo label and customer specifications.

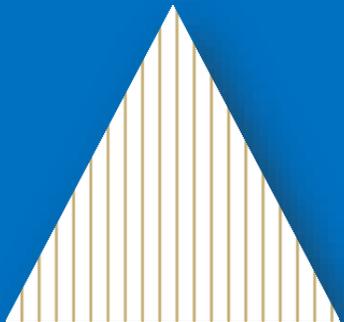

Quality and flexibility

Our experience and structure allow us to:

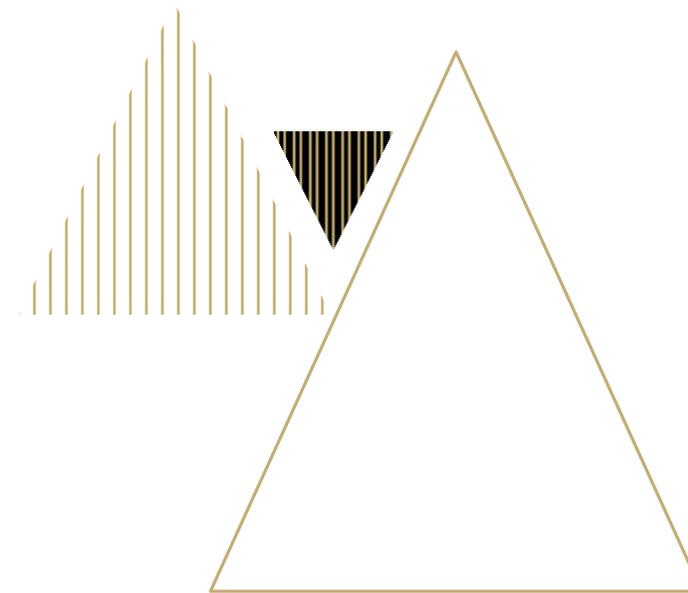

- Produce higher volumes at competitive price;
- Produce and prototype smaller volumes;
- Produce rolled and pressed exhausts;
- Produce equipments in-house

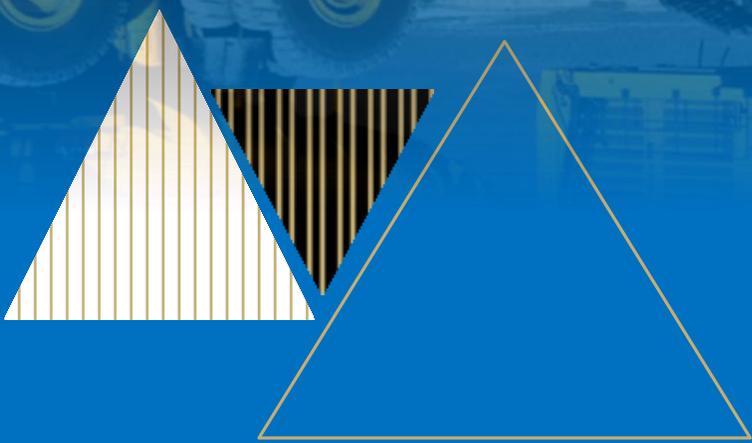

This production setup gives us the maximum flexibility to satisfy the most different requests.

Specialized division

The respect we enjoy comes from our great dedication towards the **Customer** and the **Product**.

IMASAF Pro starts from people and puts into practice what it has shared with its Customers, creating tailor-made solutions.

Custom-made solutions

The core values of our production:

- Human talent;
- Selection of the best raw materials (**Posco C&C**): aluminized steel (perfect mix between quality and cost), stainless steel;
- customized **prototyping** with 3D printing;
- Study of sound-absorbing materials;
- Study of the conditions of use;
- Study of thermal conditions for calculating temperatures on the exhaust body;
- Study of the main technical characteristics, such as type and thickness of the materials;
- Calculation of geometries (CDA);
