

## WHAT IS THE PARTS INDICATOR?

The motto „better decisions through experience“ serves as a guiding principle for the **Parts Indicator**. The **TOPMOTIVE** function provides the user with active indications and information as to which parts groups and / or working positions are to be checked on the respective vehicle. This knowledge cannot be obtained from technical information or from the manufacturer's service instructions. A new algorithm and years of evaluating and testing several million repair cases make this function possible. What is special about this is that the Parts Indicator is not based on any specifications for repairs from manufacturers, but exclusively on information that has arisen from actual repair cases.

## WHAT FUNCTIONS DOES THE PARTS INDICATOR PROVIDE?

- + The data basis of the Parts Indicator is the in-house evaluation tool TOPMOTIVE Analytics. This results in a new database that provides product groups and labor times for the selected vehicle by specifying the first registration and mileage. In addition, both top 10 product groups and top 10 labor times for a vehicle type are included, regardless of age and mileage.
- + Direct transfer of the work values to the cost estimate is possible.
- + With the selected product groups, either an article list can be called up or a calculation can be started via the FastCalculator.

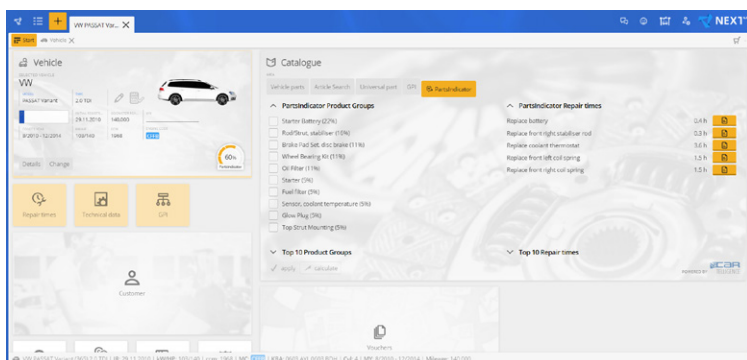

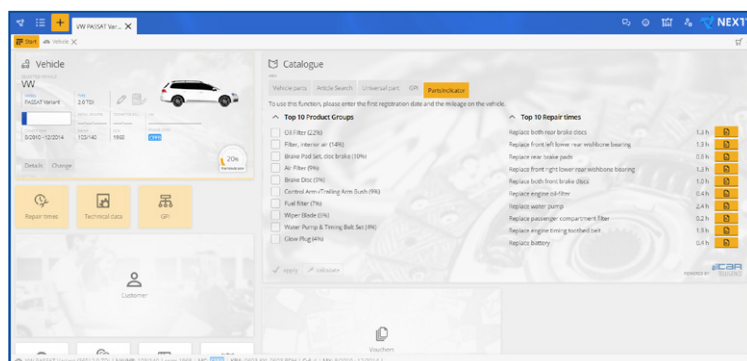

## WHAT BENEFITS DOES THE PARTS INDICATOR PROVIDE?

- + Promote sales and create repair demand.
- + Increases customer loyalty from workshop to wholesaler: more orders, fewer returns.
- + Increases customer loyalty from the cardriver to the workshop, as empirical defects are also detected on vehicles – independently of the regular service.
- + Drivers benefit from the increased road safety of their vehicles.
