Greetings

NEWAUTO PRECISION is the only manufacturer which handles die casting, processing, assembly, packaging, inspection and release directly without any subcontracting in pursuit of one-stop solution.

Therefore, our products are very competitive in terms of quality and price.

In addition, we have various quality certificates such as IATF 16949, BS EN ISO 9001:2015 and ISO 14001:2015. Our professional employees have manufactured high-quality water pumps, oil pumps, tensioners and idler bearings.

We started our business in 1985 with Die Casting Division.

Thanks to continued efforts and advanced technologies, we have exported our products to more than 50 countries around the globe including Asia, Europe, South America, the Middle East and Africa. We have impressed our clients all over the world with high quality.

We promise that we would keep making our best efforts for product development and technology improvement and satisfying our valuable clients with high quality and competitive price.

“The management philosophy of NEWAUTO PRECISION is to realize Client Satisfaction!”

Your True Partner, **NAP!**

3 Strong Points of NewAuto Precision

Differentiation which we operate die-casting, cutting, assembly and quality tests at the same time in Korea

The best quality, highly competitive price and the fastest delivery

Challenge spirit for being a global leader to the next generation

We always do our best and make our efforts to be the best in the future auto parts market.

Certification & Quality Management

NEW AUTO PRECISION has manufactured and provided the finest products through professionals. To meet our clients' diverse needs, we have strictly observed technical and operating standards which have been established based on quality systems such as IATF 16949, ISO 9001:2015 and ISO 14001:2015 and implemented quality assurance activities through all processes including planning, design, production and sale. In addition, all our employees engage in quality improvement and facility management activities and make continued efforts to establish a quality management system to realize 'ZERO DEFECT'.

IATF 16949:2016

ISO 9001:2015

ISO/TS 16949:2009

ISO 14001:2015

Certification as a Component /Material Expert Corporation

Certification as a Promising Export Firm

Certification of the R&D Department

Certification as a Company-specific Approved Exporter (FTA)

Certification of INNO-BIZ

Die Casting

Based on advanced facilities (TOSHIBA), finest technology (die casting professionals) and 3-decade long experience and knowhow in die casting, we have manufactured and provided the best automobile parts (e.g, housing, cover, etc.).

Machining

With advanced facilities (e.g., high-precision machining center, CNC automatic lathe, tapping center, milling machine, etc.) and specialized technologies and manufacturing capacities, we have promptly responded to clients' various orders and produced diverse products such as aluminum parts, precision-machine parts and automobile parts.

Assembly Line

Based on the accumulation of skilled labor, advanced technical knowhow and continued facility investments, we have established a one-step manufacturing system from assembly to inspection and manufactured and distributed the best products.

Packing

We have our own brand box-packaging technology for the secure and fast loading/unloading of products and to keep product values intact during inland transport and overseas shipment. We are also able to design tailored box packages to meet our clients' diverse needs.

Research & Development

NEW AUTO PRECISION has organized and made a huge investment in R&D Department to provide the finest products at reasonable prices to its valuable clients all over the world. Thanks to continued efforts and investment in resources for R&Ds, innovative processes and advanced technology, the R&D Department keeps growing. The employees' creativity and solutions acquired through continuous communication and new ideas are our highest assets and growth engine.

We produce and provide high-quality products through hundreds of experiments. It is R&D Department's core competency to create sustainable growth and values through technology development and grab and expand an opportunity for revenue.

Water Pump

Function of Water Pump

A water pump is mounted on the cylinder block and fastened by the bolts. It circulates cooling water by getting the driving force of crankshaft through the water pump drive belt or gear.

The coolant is being sent from the bottom to the water jacket wrapping around the cylinder and cylinder head by the water pump, and the heated coolant is retrieved and cooled off in a radiator. Then, the coolant flows into the middle of an impeller and is being extruded outwardly by centrifugal force. Then, it is being flown to the cylinder block or head.

In case an engine, the heart of automobile, is heated, the coolant is being circulated to cool it down. In case the engine temperature keeps rising and even reaches up to a certain level, engine parts could malfunction. The circulation of cooling water could also be needed to operate a heater which makes water pump a significant part in an automobile.

*1) **Impeller:** Generates rotation with the force created by water or steam

*2) **Cylinder head:** A casting that covers the top of a cylinder. A gasket is inserted between the joint surfaces of a cylinder head and a cylinder block and fastened by bolts to prevent compressed gas from leaking.

*3) **Cylinder block:** So-called engine block; it is an engine body designed to mount a cylinder where pistons move up and down and accessories.

Oil Pump

Function of Oil Pump

In an engine, parts need to move smoothly all the time. For this, oil reduces friction, and it is moved by an oil pump. An oil pump sucks oil from an oil pan and sends it to components. In general, it is installed in an oil pan. Since all moving parts should be lubricated, oil smoothes the functioning of engine parts.

An oil pump circulates carbon residues inside an engine as well as oil. They are being filtered through an oil filter and can be reused.

OEM No. 94580158
 16100A70B23000
Vehicle TIC0

NAP No. NEW-D0100P
OEM No. 96325246
Vehicle KALOS 1.2

Tensioner

Function of Tensioner

A tensioner is a device designed to keep the camshaft-rotating timing chain from being slackened by connecting the crankshaft timing gear and camshaft timing gear. It regulates the belt tension to keep the engine output constant.

It ensures smooth belt operation and is usually round in shape.

Idler

Function of Idler

An idler refers to a pulley or sprocket attached to adjust belt or chain tension in the engine. If camshaft-driving timing belt/chain or auxiliary machine-driving belt is pressed, the center of rotation shifts, which is called, 'idler'.

***Sprocket:** A powered machine component fixed to the rotating shaft and inserted into chain links to transmit power

Wheel Bearing

Function of Wheel Bearing

Wheel bearing is a bearing attached to car wheels to transmit power. The first-generation wheel bearing is assembled between the hub and knuckle to deliver the rotation and steering of the hub.

OAP (Overrunning Alternator Pulley)

Function of OAP

The OAP has a role which protects an alternator from a rapid engine and gives a movement of an engine natural. The OAP has a clutch in a pulley and relaxes irregular vibration of rotation.

*Alternator: An electrical generator which supplies power to a vehicle's electrical components
