

Crystal Foils are pre-patterned hotmelt resin based films ready to transfer.

Crystal foils have transparent color but it can be encolored with hot stamping foils.

We can also produce crystal foils in some definite colors as white, beige, brown and black. These colored crystal foil resins are used mainly on dark surface leather and textile, therefore transparent foils can show itself clearly.

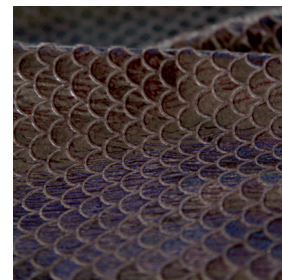

Crystal foil -transparent

Colored Crystal foils - white - beige

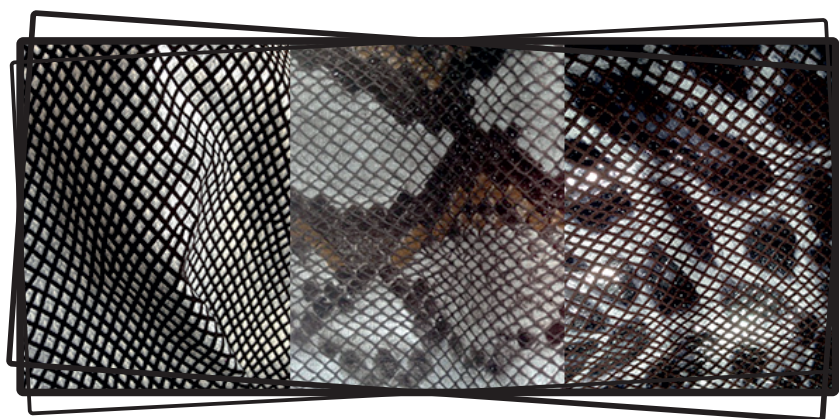

bofo-1470 & silver foil

bofo-1020

bofo-1390

only 1470C printed fabric

1471W&F-136-05

1470W&F-129-01

Available Quantities & Sizes

3" core 200mt length, 160cm width
Foil thickness are between 50-150 micron

Conformity

Polyester based fabrics
Cotton based fabrics
Elastic fabrics
Knitted or woven fabrics
Genuine leather

Application Parameters

Flat Press:

Temperature: 150C

Pressure: 6bar

Contact time: 5-6sec.

Rotopress:

Temperature: 160C

Pressure: 6bar

Speed: 3-5mt/min

Combine Foils (1 step foil)

Combine foils are a simple combination of hot stamping foils with crystal foil resin. You can apply combine foils onto leather or fabric at one step of transfer to get final result of gold silver color with ready patterns. It helps you to transfer onto elastic or weak surfaces like knitwear
