

Silicone Pressure Rollers

The ESBAND Silicone Pressure Rollers can be used to attach labels on uneven surfaces (e.g. ham) for example. When pressing the labels, adhesive residues may remain on the pressure rollers. Common solutions are cast-molded parts, which cause high costs for castings when new developed parts and / or parts in new dimensions are needed. Therefore, the ESBAND Silicone Pressure Rollers are your individual and reliable alternative.

Advantages

- Food compatible material
- Good temperature resistance
- Easy to clean respectively dirt-repellent
- High coefficient of friction
- Individual dimensions and / or recesses possible
- Small-batch productions without high costs for castings possible
- Various material hardness

Sector

Food industry
