Lighting tubes

Light + more for stations

Luminaires

according to your design

Metal technology

innovative and precise

From simple lighting tubes and handrails to complex media carrier systems - we offer a comprehensive portfolio of various solutions in aluminium and stainless steel, for station platforms and numerous other application options.

In cooperation with architects and planners, we develop and manufacture project-related solutions for individual architectural lighting indoors and outdoors, as well as luminaires with special requirements and for technical purposes.

Whether for medical technology or mechanical engineering - we manufacture a wide variety of metal products. The spectrum ranges from custom-made cladding and fixtures to art and design objects and contract manufacturing of components.

+ Lighting tubes

PARA media channel with rhomboid cross-section and chamfered end covers. Two involute curves lead into each entrance. Lighting tube along the facade with 3 light components: facade illumination with LED wallwasher type SLOPE; walkway illumination with asymmetrical LED luminaires type VARYO; ceiling brightening by using LED luminaires with trough reflector. Lighting tube along the open side without wallwasher. Both tubes equipped with CCTV cameras, emergency lights and flashing lights, light colour circadianely controllable (HCL).

+ Column illumination

Column base cladding with stainless steel cylinders. Each unit holds 16 YECTO 1.R uplights with asymmetrical LED inserts for white or coloured light accents, controlled by DMX.

+ **Product design:** Markus Bischof

+ **Lighting design:** Martin Klingler

+ **Architecture:** Netzwerkarchitekten GmbH

YECTO 1.R uplights around the columns

Involute curved tubes at the entrances

PARA media channel with 3 light components

+ Illumination of a historical bridge soffit:

Lighting tube system 1060 (ø 150 mm) with indirect light inserts LACA with flatbeam technology

+ Pedestrian overpass at the station:

Specially designed light inserts, fitted into the rectangular profiles of the bridge structure.
LED luminaires in two different variants, with asymmetrical light distribution sideways and downwards;
with anti-glare lamellas or serrated dazzle screen and an internal opaque glass cover.

+ Illumination of the footpath and the stairway:

Handrail system 2590 (ø 48 mm) with asymmetrical LED light inserts

+ Illumination of the pavements on the Würnitzbrücke:

Handrail system 2590 (ø 48 mm) with asymmetrical LED light inserts

+ Illumination of the footpath and the car park at the employment agency:

Light masts, bollards and wall luminaires with different asymmetrical LED light inserts as well as integrated PICO lighnode light control with zoned sensors for motion and brightness

+ Illumination of the footpath from the town moat into the basement of the Main Station:

Vandal-proof NORIS parapet luminaires with Flatbeam technology distribute the light in an extremely flat angle on the street for a maximum light efficiency with the least possible light pollution.

Foto: mm Photo

+ Platform lighting

Media channel round $\varnothing$ 150mm type 1060, mounted with double pendulums to the steel structure, equipped with direct luminaires and loudspeakers.

+ Baffle illumination

Sections of lighting tube type 1060 with direct luminaires, mounted in a continuous row to the upper end of the baffle supports.

Baffle unit

Lighting tube at the baffle

Media channel at the platform

+ Platform lighting

Special solution of media channel with trapezoidal cross-section 700 x 905 mm, mounted with cantilevers to steel supports. Equipped with direct light inserts type VARYO II diverging in lengths and light distribution characteristics, the channel furthermore contains cable trays, supports for large screens, direction indicators, information panels, loudspeakers, emergency systems, fire detectors, cameras, WLAN and Radio antennas as well as indirect luminaires.

+ Metal work

Steel structures and stainless steel claddings of the supporting columns for the media channel, Columns with integrated fire extinguishing equipment, metal cladding of the elevators

Elevator and column claddings

Columns, cantilevers and media channel

VARYO II

Media channel with luminaires and attachments

- + **Mezzanine level:** Lighting Tube System 2127 (300x524 mm) with laterally accessible cable trays
- + **Platform level:** Lighting Tube System 2119 (230x115 mm) combined with a fire protection paneling above the safety wall with integrated air-condition outlets

+ Platform illumination:

Lighting tube system 1067 ø400 mm as twin units mounted to cantilever beams, each 3x 39W T5 indirect, 1x 70W HIT-DE direct

+ **Architecture:** K2B Architects, Hamburg

View from upper level

Seating furniture

Wall panelling

Tree structure

+ Platform

Lighting: Media channel $\varnothing$ 400 mm at pendant rods, containing diect luminaires, lateral light outlets and loudspeaker inserts; wall luminaires made of perforated stainless steel plates with backlight.

Platform equipment: Wall panelling with integrated seats made of perforated stainless steel plates; high-gloss aluminium calottes covering the cavities in the tubing segments

+ Distribution levels, accesses and stairs

Lighting: Wall luminaires and indirect lights with light guiding lamellas, chandelier "imperial crown"

Equipment: Wall panellings with integrated doors and seats made of perforated stainless steel plates and high-gloss metal, light well cladding with high-gloss metal, tree structure made of stainless steel and high-gloss aluminium calottes
