Ambiloom® Collection

Innovative lighting objects for a unique interior design

ETTLIN LUX® has developed a patented special light-technical fabric. When backlit by LEDs, this fabric creates exciting three-dimensional light lines. This effect is what makes the **Ambiloom® collection** unique.

The collection represents functional products that are convincing as design elements and ambient lighting objects at the same time. In a surprising yet discreet way, the wall mirrors and luminaires make any room special.

The mirror collection includes modern wall mirrors in four different formats with ambient lighting as an additional function. For this purpose, the composite of high-quality, translucent mirror glass and ETTLIN LUX® fabric, is backlit by LEDs integrated on the back plate. The lighting scenario unfolds via a touch sensor integrated into the aluminum frame. Three-dimensional light lines shine on the surface of the mirror. These give interiors optical depth and a special atmosphere. When switched off, the mirror image is clear.

The Ambiloom® luminaires convince with textile surface, functional downlight and ambient light effect. Elegant and discreet appearance also when they are switched off, they blend harmoniously into a wide variety of interiors. It is the ambient light that makes the luminaires a room-defining element. Ambiloom® luminaires are available as floor lamps or as pendant luminaires in various designs.
