

DIVUS Complete Solution

EN

FROM THE BASIC TO THE DELUXE VERSION

Visualisation

With KNX CONTROL, DIVUS offers a complete package as a visualization solution that is versatile, intuitive and fast to use, while covering the entire performance spectrum.

The KNX SERVER or the Stand Alone Panel KNX IQ control, manage and visualize all components of your building. The intelligent control system, from the lighting, via the door intercom system to the energy management system, not only increases the living comfort of the occupants, but also increases the cost-effectiveness and security of the building.

DIVUS offers solutions for the visualization also of small and complex buildings, leaving nothing to be desired. The system is flexibly expandable and can be combined with many devices - in a quick, easy and cost-saving manner. Thanks to the supplied DIVUS OPTIMA or DIVUS VISION surface, the control is self-explanatory and can be carried out in many ways using smartphones, tablets or touch panels. With a tap, you increase the feel-good factor and the quality of life in your smart home. A high-quality design of the products, which can be easily integrated into the overall architectural picture of each building and can be personally adapted if required, adds visual value.

Network

DIVUS HEARTBEAT is the solution for your secure, stable smart home network. It's a hardware-software solution comprised of a PoE + enabled managed switch and an innovative manager.

Safety in the smart home is of course the highest priority. DIVUS HEARTBEAT provides secure areas for the building services, the door intercom system and the home network. Through a firewall the networks are separated from each other and thus run safely and stably. DIVUS HEARTBEAT offers new features and functions that benefit both the system integrator and the end-user in everyday use.

The advantages of the DIVUS HEARTBEAT speak for themselves: it saves time and thus money, also the installation processes are simpler and faster. In addition, troubleshooting is speeded up as the system integrator is progressively navigated through the „intuitive configuration“ navigation. Tedious troubleshooting and wrong configurations are a thing of the past.

Touch panel

The range of touch panels extends from the small 8" (20,32cm) device to the 19" display. For every project you will find the right panel with the required performance and operating system. It does not matter whether you prefer Windows or Android for your visualization projects.

DIVUS offers you elegant and wall-mounted touch panels for your individual wishes and ideas. An advantage of permanently installed touch panels: they are always powered up, are always traceable and reliably on hand whenever they are needed.

In addition, DIVUS touch panels are not designed exclusively for building control, they are rather multi-function panels for controlling the building functions, they are intercom indoor stations, IP CAM viewer, multiroom control center and much more. The elegant panels stay discreetly in the background. No matter whether you opt for the white or black version in landscape or portrait format.

Intercom

The front door is the access to the private and thus well-kept living space. With DIVUS CIRCLE or CIRCLE small as the outdoor unit and DIVUS touch panels as the indoor unit, you get an intercom system that stands for comprehensive convenience, increased security and elegant design.

As a system, this bundle (perfectly coordinated package consisting of DIVUS CIRCLE and DIVUS TOUCHZONE) sets new standards with excellent design and future-oriented technology for private buildings, offices, medical practices, shops and commercial properties up to tower buildings.

DIVUS CIRCLE is your personal bodyguard, a wall light and a video door station that increases security and comfort. DIVUS CIRCLE looks at the approaching guest with a warm smile or a sceptical look, depending on the time of day and configuration. Operating the CIRCLE is intuitive and simple.

Smart and intuitive

Low initial investment for the installation in your building.

There is a suitable solution for every customer. The Basic Package is the basic equipment for a modern flat. If the DIVUS Basic Package is not sufficient for the intelligent control of your property, you can propose the Standard or the Deluxe Solution.

A building automation system from DIVUS represents an intelligent investment in the future, which increases the value of your property and maintains it in the long term. The advantages of installation and configuration also speak for themselves: EASY, FAST and PROBLEMLESS, every visualisation project can be adapted to the wishes of the buyer. If customers express individual wishes, you are able to quickly react to all requirements and satisfy them in every case.

KNX IQ

KNX Stand Alone Panel

The KNX IQ touch panel is a stand-alone panel via which the entire visualization of the flat can be displayed and controlled. The panel is equipped with an 8" capacitive touch display. It is a surface-mounted device that can be installed in many existing boxes (retro-fit) and protrudes only slightly from the wall. It is installed in landscape format.

The visualization DIVUS VISION convinces with its simplicity in the implementation by the system integrator and control by the customer. Lights, shading, temperature, music, alarms can be conveniently managed and controlled via the panel. In addition, smart devices can be integrated into the visualization.

DELUXE SOLUTION

If the buyer wants the complete package, he can choose the deluxe solution. More touch panels are installed. The visualization can be supplemented by individual floor plans or room photos as backgrounds. Personalized designed icons can be simply dragged and dropped in the room. The electrical installation of your property can be adapted to the needs of your customers.

STANDARD SOLUTION

In contrast to the BASIC Solution, the STANDARD Solution offers more options for your visualization on the D+ SERVER. In this case, the touch panel DIVUS TOUCHZONE is used. Instead of the door-bell button, the CIRCLE small is placed in front of the door, which offers additional comfort through its video function. If required, the OPTIMA visualization can be easily and quickly adapted to the wishes of the customer.

BASIC SOLUTION

The starter package for the smart apartment includes: 1x KNX IQ and 1x DIVUS HEARTBEAT Manager. It is a very affordable entry into the world of smart homes.

The visualization of the apartment can be created quickly and easily with the DIVUS VISION user interface. In raster optics you control lights, temperature, shading, scenarios and much more.

INTERCOM SOLUTION

The CTP08-TK door call station is the ideal solution for those who do not need a Smart Home. Even for small flats. You only need 1x CTP08 and a bell push button. The CTP08-TK can also be connected to the DIVUS CIRCLE video door intercom. In addition, you can display IP Cams on the panel and view web content in full screen mode via the kiosk browser.
