IFÖ ELECTRIC

"The autumn launch continues the company tradition of manufacturing durable porcelain light fittings, for today and tomorrow."

– Anders Öringe, CEO

OPUS

When the first Opus luminaire was launched in 2006, it entered the Ifö Electric assortment as the first porcelain light fitting with a contemporary appearance. The award-winning minimalistic and geometric design by Duoform has attracted architects and interior designers from all around the world. Opus has found homes across Europe in all kinds of contexts, as an appreciated light source in Italian fashion boutiques, as well as private homes in Barcelona and London.

The broad configuration possibilities and wide range of sizes makes the luminaire program suitable for spaces where there is a desire to let light fittings merge with architecture, to achieve dynamic and well-lit spaces and facades. The high gloss glazed base contrasting the silk matt surface of the opal glass, makes it popular - and the splash safe feature makes it almost unlimited in ways of use. The collection is characterized by the ability to offer a light solution for most situations, indoors and outdoors.

The 2020 autumn launch introduces both a new figure and updated light technology. A new clear glass option with a visible E27 light bulb and a high gloss glazed lamp holder, opens up for an expressive look in large scale interiors. The matt opal glass version hides the E27 light bulb and offers a pleasant, diffused light. If a LED module is preferred as light source, there is an option covering that need as well. Another Opus collection update is the possibility to select a GX53 light source for the existing Opus 140/100.

All new additions are splash safe IP44 and available in high gloss black, white or grey glaze. Brown glaze is available upon request.
