

CLASSIC GLOBE

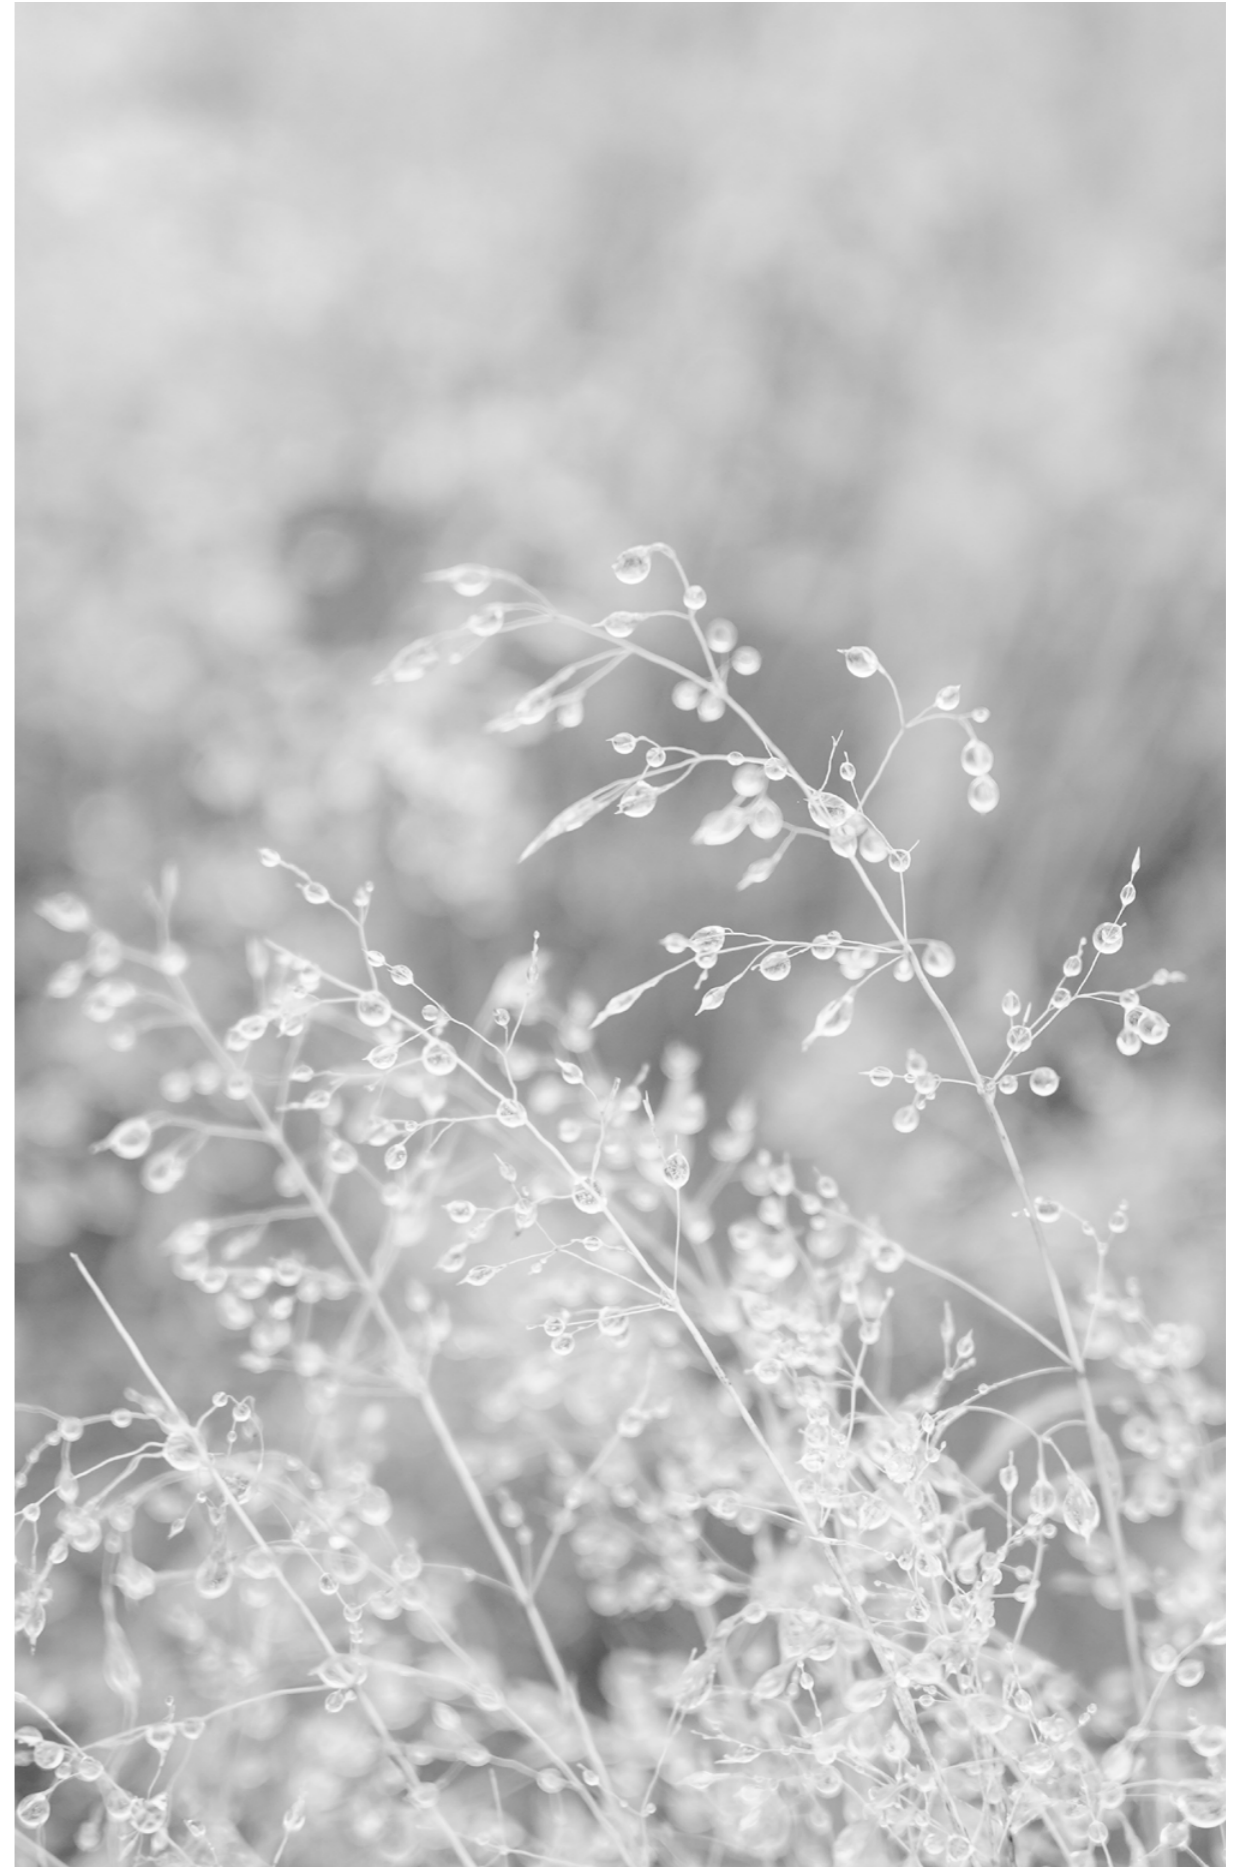

News 2020

IFÖ ELECTRIC

"The new Classic Globe figures can be considered a tribute to the electric invention that first illuminated our homes and houses – the E27 light bulb, our most common and used light source."

– Måns Kiaer, Product Manager Lighting

CLASSIC GLOBE

The sphere has always been a classic and iconic motif for lighting designs. A beautiful basic shape borrowed from nature. The Ifö Electric take on the theme, the Classic Globe Collection, is easy to relate to and has been a darling for decades. Luminaires with the ability to adorn spaces, through pleasant light - installed as solitary decorative luminaires or repeated in glowing rows.

Various older spheric shades and porcelain bases have been part of the company assortment since the 70s. In 2012 Anders Öringe, CEO, decided to bring them together into a cohesive concept. The new collection of classic globes quickly grew into a larger family, since they were easy to use and easy to place. Over the years there has been continuous updates and additions, both in sizes and light technology, to meet requests and new standards. Today the Classic Globe collection may be installed in all kinds of situations - from bathrooms and restaurants to hotel entrances and facades.

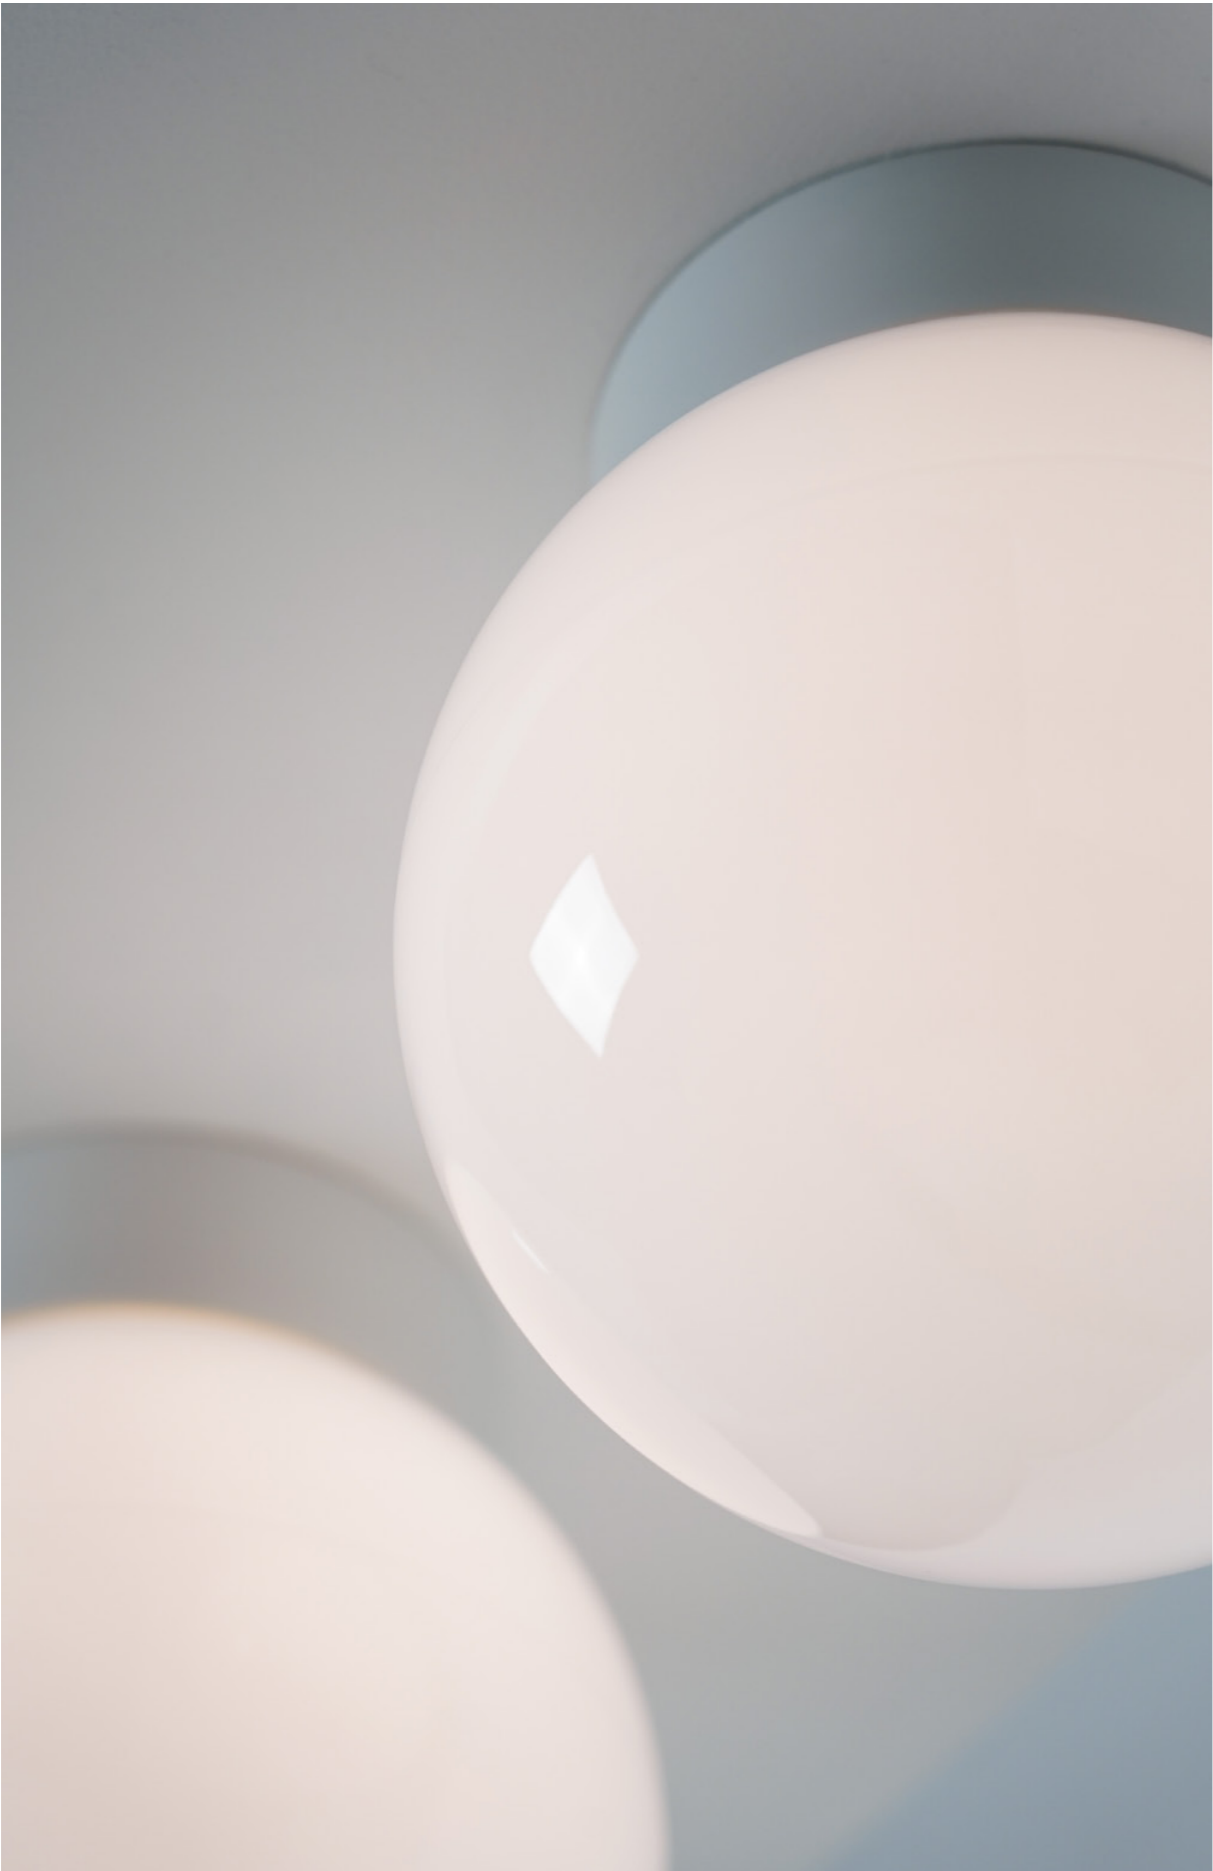

The new Classic Globe additions includes a porcelain lamp holder for E27 light bulbs. A development focusing on optimizing the balance between the porcelain base, the globe and the position of the light source. The result is a well-proportioned, harmonious new Classic Globe. The light fittings are paired up with either a shiny opal globe, a matt opal edition or a clear glass version. The clear glass globe comes with a high gloss glazed E27 lamp holder, bringing out the best of the lustrous and elegant material.

All new Classic Globe additions are splash safe IP44 and available in high gloss black or white glaze. Grey and brown glaze are available upon request.
