

Cables for The building sector

Within the building sector a lot of specific steel cables are necessary. Both within the residential and industrial building constructions, the possibilities are endless. Amongst others, cables are needed for hoisting applications like the hoisting of prefab walls, safety cables for the protection of persons, cables for mechanical applications within the domain of cabinet-making like cables and guide rails for pivotal windows, roll-down shutters, garage gates, blinds, and cables for architectural projects.

Because the specific cables for the building industry have to meet strict safety standards and every building project is different, our engineering department discusses and studies each project in detail with our customers. Furthermore, just-in-time delivery is one of our strengths, thanks to which we are highly regarded within the industrial building construction sector for years.

Velda Cable Technics is also the perfect partner for specific architectural applications. We deliver cables for stainless steel balustrades and fencing, cables for constructing exhibition stands and showrooms, cables for architectural tent structures and so on.

Quality cables since 1935

CABLE TECHNICS

Cables for The building sector

Why opt for Velda Cable Technics?

As a European-based company with a high-performance unit in Asia, we focus on big-volume cable production and assembly following the European certification systems.

Our logistic activities are coordinated and centralized in Europe. The smaller series are produced in our Belgian production unit. This combination guarantees flexible stock conditions and just-in-time deliveries at sharp prices.

In short, Velda combines flexibility and sharp prices with European top quality.

Custom made goods

We control and supervise the entire production process. We can produce almost any kind of cable, suspension, etc. on demand. Contact our commercial department to inquire about your specific needs.
