

Dovit, **the home automation solution compatible** with other standards and protocols

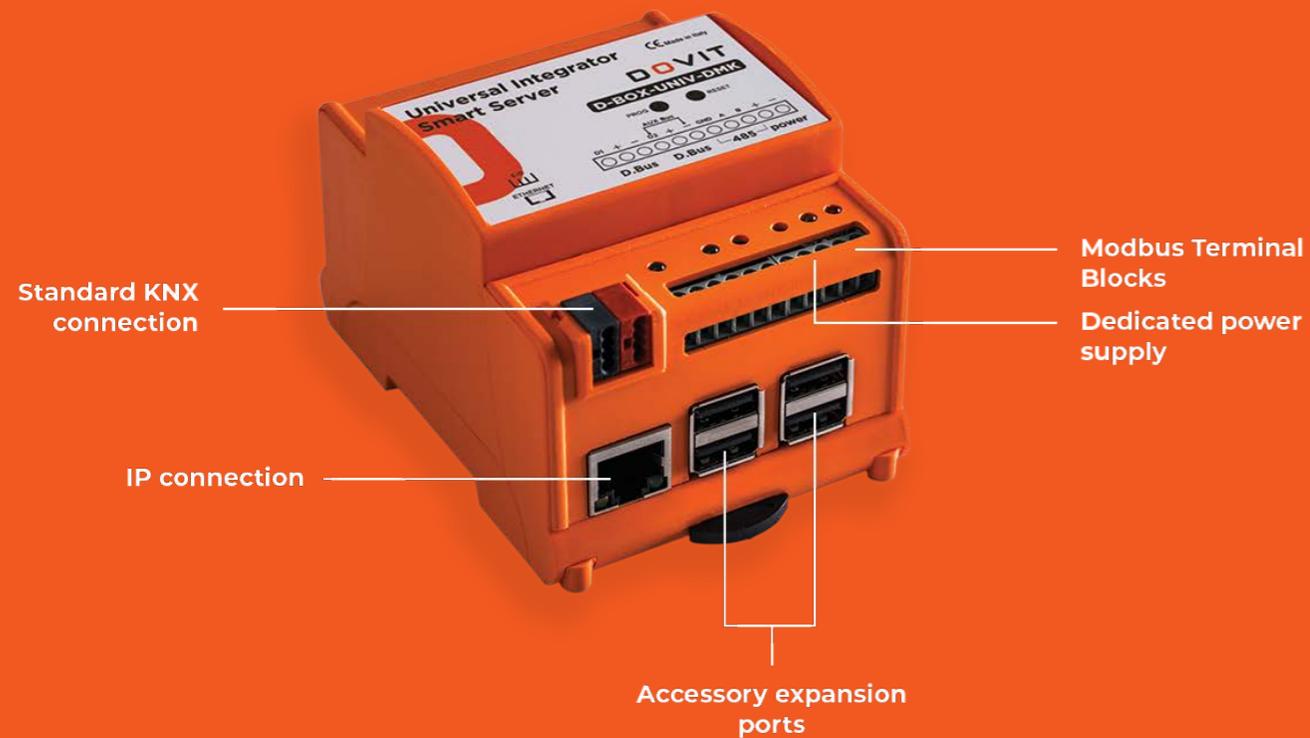

The central image shows an orange Dovit Universal Integrator Hub. It is a rectangular device with a top panel labeled 'DOVIT Universal Integrator Hub' and 'Smart Server'. Below the top panel, there are several ports: a USB port, a FireWire port, and two Ethernet ports. The hub is connected to a smartphone and a tablet, both displaying the Dovit mobile application interface. The app shows various smart home controls, including a thermostat set to 19.5°C, a door lock, and other sensors. Surrounding the central image are numerous logos of compatible protocols, brands, and services.

Logos and brands shown include:

- ASHRAE BACnet
- DALI
- KNX
- Modbus
- M-Bus
- Apple
- Linux
- Microsoft
- zigbee
- iOS
- android
- RUS electronics
- DAIKIN
- 2N
- RISCO GROUP
- Spotify
- MITSUBISHI
- SAMSUNG
- IFTTT
- HIKVISION
- amazon alexa
- hue personal wireless lighting
- IKEA
- Google Home
- Telegram

**DOVIT**

Give your home a brain.

## DO.Control, a reliable and scalable server over time

**DO.Control is the heart of our Smart Home system. It is compatible and works with a wide variety of products including connected switches for lighting, openings, and thermostats. You can easily customize your home according to your current needs and add more features later.**

The software openness of Dovit products allows you to choose from a wide selection of compatible solutions. Our system ensures very fast integration of new devices and market standards while offering a vast choice of possible integrations.

The DO.Control integration server is a powerful and flexible tool, particularly suitable for those who want to achieve a custom home automation integration for their projects, optimizing costs without sacrificing a professional product. With its regular updates, it is scalable and allows the integration of functions and services that will be developed in the future.

## A single server to control your entire Smart Home

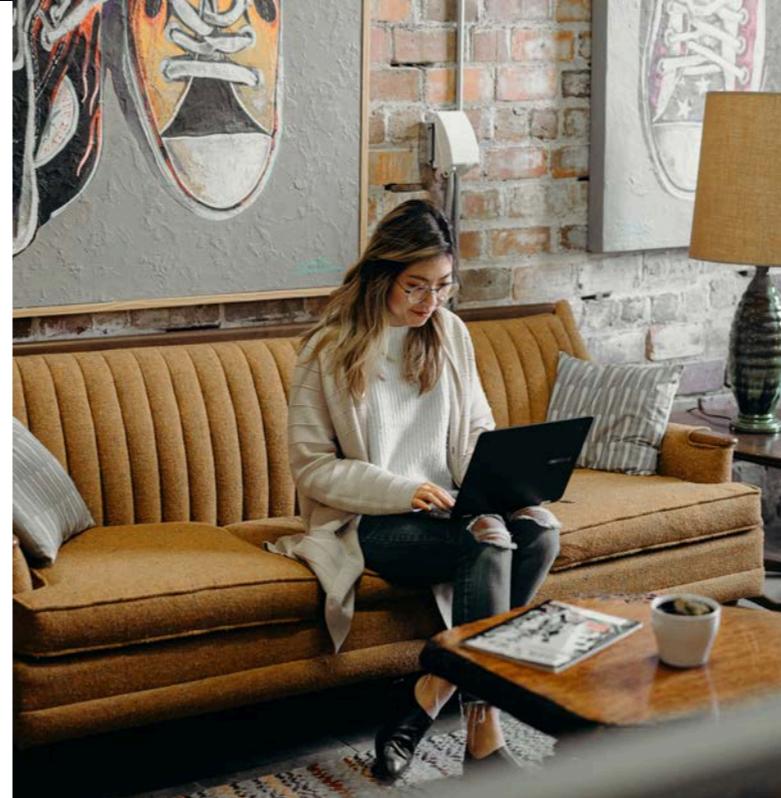

Like a human nervous system, DO.App connects all devices to work together in a smart home or building. The server offers extensive features that can be added gradually over time.

Integrate the most widespread protocols on the market and open up possibilities with wireless connectivity

Minimal wiring and maximum flexibility

No cloud with the Dovit home automation server

Your home, your data.

Your Smart Home keeps your data where it should be: on your Dovit server. Thus, DO.Control is the central device - the brain - of your connected home, where your data is stored and processed.

# Supervision of a KNX installation with Dovit for a more user-friendly interface

## KNX integration server compatible with our home automation system

Complete each of your KNX installations with a Dovit server and enjoy powerful KNX visualization. With many pre-defined program modules, you can quickly and easily create extended logics.

Whether you want to automate a house, a building or an office, the task at hand may seem complex. Fortunately, using a visualization application greatly simplifies the creation of a control interface tailored to your needs.

With the integration of all necessary KNX equipment into a single system, you can define the logic on the server and optimize the management of your living or working space. No more juggling between multiple applications or devices, everything is centralized to offer you a smooth and intuitive user experience. Don't wait any longer to simplify your daily life and adopt an intelligent automation solution through our visualization application.

## **DO.KNX** is the solution for all your smart projects

Imagine living in a home that knows your needs and habits by heart. It independently turns on and off your lighting, ensures a comfortable ambient temperature at all times, and provides constant security without any effort. Our Dovit system combined with KNX offers you this comfort and countless other possibilities.

The Dovit server has a built-in KNX module that enables direct communication and integration with the KNX bus, ensuring perfect compatibility with all KNX equipment and devices. Thanks to this seamless integration, you can easily control and monitor your home or office environment from a single user interface, allowing you to access all the features of your system.

### **A scalable and sustainable home automation solution**

DO.KNX is a reliable long-term home automation solution because it is completely scalable. Once installed, your home automation solution can be easily expanded without any issues. You have a wide selection of connected devices and functions to choose from.

The KNX module of Dovit is highly configurable and can be tailored to your specific needs, providing additional flexibility for the evolution of your home automation installation over time. In short, the KNX module of Dovit is a reliable and high-performance solution for managing your home automation system, offering seamless integration and great flexibility to meet all your control and monitoring needs.

## The most user-friendly application to control your KNX home automation system

DO.KNX enables simple control and automation of functions such as lighting, blinds, heating, ventilation, and security. These functions can be networked and customized according to your wishes and needs.

Turn lights on and off, adjust the temperature, or create new scenarios: the DO.App is the digital command center that you always have with you. The application can be designed and customized to your preferences. For example, create rooms with individual names and define meaningful icons for a better overview.

## DO.Air is the solution for wireless and dust-free renovation

Dovit offers a 360° solution that supports numerous technologies to provide its users with a unique and unparalleled living experience.

A multitude of other technologies can be easily and quickly integrated into your system thanks to the power of the software and the intelligent architecture of the Dovit server.

## DO.Air, a wireless solution to save energy

The ZigBee technology represents a major advancement for home automation by enabling low-energy wireless communication.

This solution offers a set of features that make your home smarter, safer, more comfortable, and more energy-efficient.

Based on proven technology, ZigBee is currently used in millions of connected devices, making it a protocol of choice for many users worldwide. With Zigbee 3.0, you have a complete IoT solution that allows all your smart objects to work together, thanks to a universal language.

At Dovit, we have designed our Smart Home solution to be fully compatible with Zigbee certified devices. This way, you can choose from a wide range of devices and vendors for your home or Smart Home markets, knowing that your Zigbee home automation system can easily integrate them and offer a smooth and intuitive user experience.

## Ideal solution for modernization and renovation projects

We offer a specially developed wireless solution that allows for automation to be created in installations that may not have the possibility to pull cables.

## Flexible connectivity through a large number of different IoT protocols

Like a human nervous system, our server connects all devices to work together in a smart home or building.

## Connectivité flexible via un grand nombre de protocoles IoT différents

## Save energy in your Smart Home with DO.Air

By using thermostat valves in your Dovit home automation system, you can monitor all of your energy consumption and reduce unnecessary expenses.
