

G9 LED STREET LIGHT 20W~240W

G9 20W~240W LED Street Light

Features:

① Smooth backside

Smooth, dust-proof and self-cleaning.

② Compatible design

Compatible with PC lens + tempered glass, professional light distribution, fire-proof, anti-UV.

③ Separate chamber for driver

Separate chamber better protects LED source and driver from water and heat.

④ NEMA control interface

Support NEMA control interface and wired/wireless remote single lamp control, support photocell or single lamp controller.

⑤ Latest LED technology

The latest high-brightness outdoor SMD LED chip, combined with integrated lens and lower current drive, 10% increased in overall lighting efficiency and lower light decay.

⑥ Expert lens for light distribution

Professional secondary optics design, maximum equalization of individual parameters, while extremely reducing color reproduction, and supporting rapid light distribution expansion.

⑦ Dual installation direction

Supporting horizontal/vertical installation/adjustable angle.

⑧ Die-casting aluminum housing

Die-casting aluminum housing with over-all protection, 4 times of gravity test, adapt to harsh environments and stormy weather.

⑨ IP66 protection

Adopt overall structure waterproof design $\geq$ IP66.

SPECIFICATION

Power Consumption	20W	30W	40W	50W	60W	75W
Instant Output Lumen	2800 lm	4200 lm	5600 lm	7000 lm	8400 lm	10500 lm

Color	Warm White (WW)	Neutral White (NW)	Cool White (CW)	Cool White (CW)
Color Temperature	3000±300K	4000±300K	5000±300K	5700±300K
Typical CRI	≥70			
Beam Angle	160°/85°, 160°/95°			
Material	Alloy Aluminum, Optical PC, Tempered Glass, Stainless Steel			
Operating Temperature	-30°C~+60°C			
Storage Temperature	-30°C~+50°C			
Frequency	47~63HZ			
Input Voltage	100~240V AC			

LED SPECIFICATION

LED Brand	Lumileds/CREE
LED Size	3.0X3.0X0.52 mm
Viewing Angle	120°

Model No.	0.2~0.7 W
CRI	≥70
LED Lumen	185-200 lm/W

LIGHT DISTRIBUTION CURVE

Mean beam Angle (50%) : 116.2°

Mean beam Angle (50%) : 123.0°

Wiring:

Cut off the power input (turn the switch gear to "OFF"). Connect the core wires of the power cable to the input wire of lamp correspondingly (lamp input wire: brown to the power grid L (Live line), blue to the power grid N (Neutral line), yellow-green to the power grid G (ground wire) , and wrap with fireproof insulating tape according to safety regulations).

Installation steps:

1. Screw the photocontrol onto the base (optional)
2. Fasten the hoop to the lamp body with bolts
3. Connect the cable according to the wiring diagram
4. Loosen the fastening screws, align the hoop mouth with the light pole in the direction of the arrow shown in the figure, and slowly slide the light pole to the bottom;
5. Refer to the level bubble, rotate the lamp to keep it parallel to the direction of the road, then tighten two fixing screws, and finally tighten two fastening nuts.

Remarks:

Light pole diameter can be 52mm ~ 60mm;
Horizontal or vertical installation available, $\pm 15^\circ$ elevation and depression angle adjustment;
Hex wrench would be used when installing, and the tightening strength is 18Nm.

Inspection after installation:

1. Firmness, cleanliness; direction, angle.
2. The wire is not exposed and the wire sheath is not damaged.
3. Power-on inspection (air switch and other devices need to be turned to the ON position); the control system need overall adjustment; For lamps with construction errors, they need to be power off and to do re-construction.
