- *We look forward to service you and welcome you as our partner.*

"Less and more"

We make quality insurance tests on ALL our batches before shipping.

This means we make sooting tests.

Burning test in circles of 3 x 4 hours.

We test flame heights, after glowing.

We test for centralisation for wick.

We make strict colour control / stability

We have an integrated traceability system that with a code on the barcode label means we can track each candle back to the raw materials and workforce producing / controlling the goods.

RAL approved raw-materials, meaning example that Sulphur content is max. 20 ppm, Benzene is max. 0,5 ppm and Toluene is max 5,0 ppm.

All our products are in compliance with:

CEN candle standard EN 15494 product safety labels

CEN candle standard EN 15493 for fire safety

CEN candle standard EN 15426 specifications for sooting behaviour

RAL-GZ 04 1/1 standard for quality and inspection
