

MOBILE UNIT TEST LAB

Reporter	Luca
Version	V1
Date	2021-6-10

Iveco Daily shown before the graphics were installed.

The unit was chosen to be the biggest possible in terms of volume, so long wheelbase and longer back as well as taller possible unit, but keeping the weight below the 3.5 ton, so that it can be driven with the same driving licence as the car.

The doors in the back open completely if necessary.

Internal view (1)

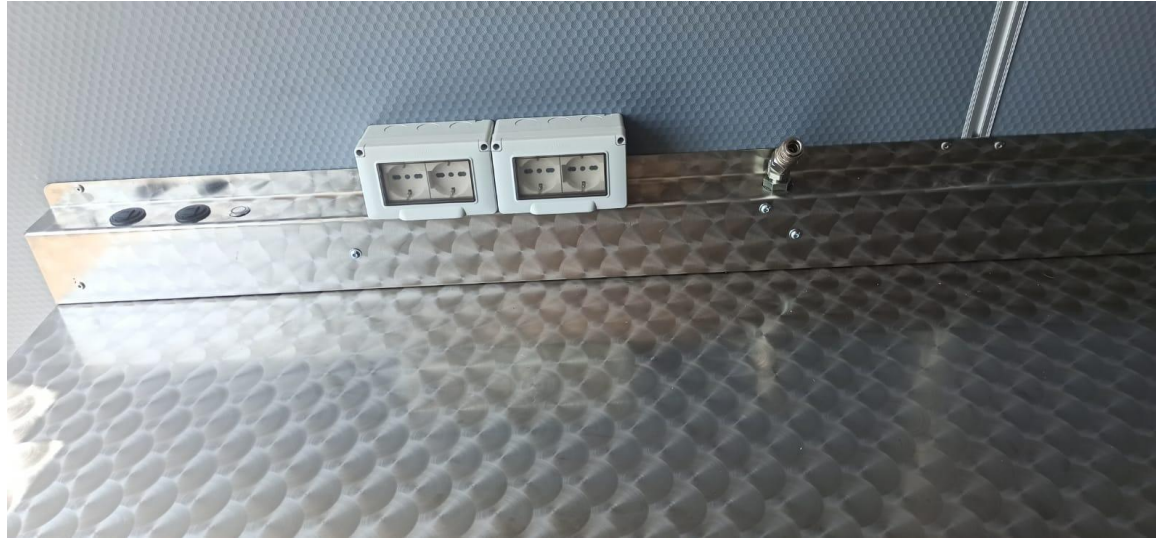

Detail of the test bench location and on the left side the electric cabinet.

The work benches are equipped with machine vices and compressed air plugs

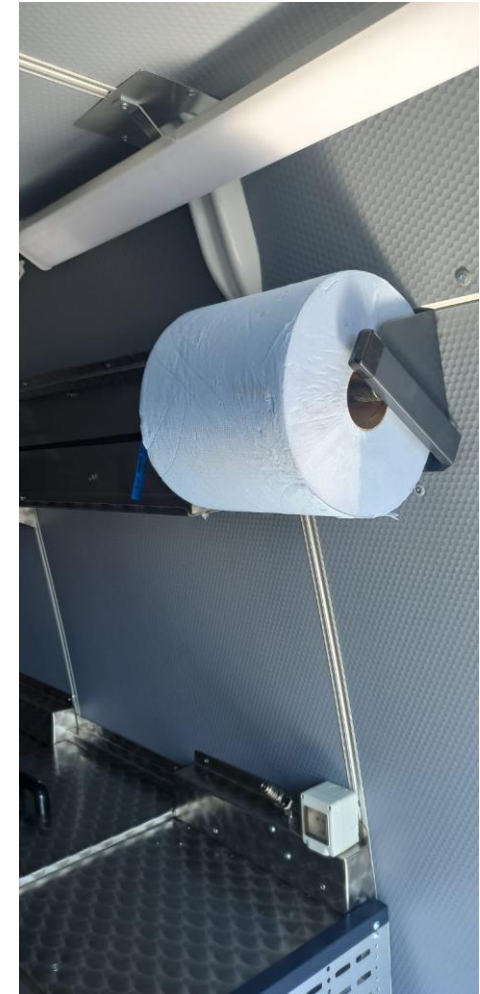

Internal view (3)

Electric plugs in order to work with the PC and a pop-up table are present. Here a possible improvement could be to place a oil proof cushion to sit more comfortably working with the PC.

Internal view (3)

Lateral rails for components' box transport, air conditioner, paper holder and rails of internal lamps.

Graphics installed on the left side.

Graphics installed on the right side.

Rear view graphics installation

Graphics installed on the back.
