HD8000 Video Meeting Conference System

The remote video conference system refers to the remote video conference system devices for two or more individuals or groups in different places to share and send files and images in the meeting for instant and interactive communication by using microphone speaker equipment including cameras, display devices, microphones and speakers through the Internet transmission cable. This system is a typical image communication, as the images and sound signals are converted into digital signals at the sending end of the communication, and then reproduced as visual and auditory information at the receiving end. Compared with the telephone conference, it is more intuitive and has more information. By using the remote video conference system, you can not only hear the sound, but also see the conference participants, jointly facing the problems to be discussed, studying the drawings and objects, which is no different from a real conference, so that every participant has an immersive experience.

- The high frequency part adopts wave converter, combined with a British mid low drive unit with a midrange plug. The treble uses a compression unit with low distortion titanium composite film. The specially designed high vaulted dome structure increases the strength of the diaphragm and reduces harmonic distortion.
- The bass adopts specially developed dual voice coil unit. Similar to Class AB amplifier, the push pull structure reduces the harmonic distortion.
- All aluminum built in hanger reduces the weight of the box, supporting hanging up to 16 speakers, with 7:1 safety factor. Up to 8 kinds of hanging installation, extended the use of the speaker.

- The bass adopts specially developed dual voice coil unit. Similar to Class AB amplifier, the push pull structure reduces the harmonic distortion.
- Russian birch plywood housing, painted mesh with sound transmitting cotton.

- Compared to the structure of the traditional single voice coil, it doubles the heat capacity and voice coil heat radiation area, in order to achieve double power. The two reversed voice coil, can offset the inductance themselves, improve the unit's middle frequency of the bass , while maintaining the strength of bass, reduce low frequency distortion while expand the low frequency.
- LA1420 along with LA1420S make a stacked type curve array system, to maintain the bass, expand the low frequency while reducing low frequency distortion. They can increase 35-50Hz band output, and significantly increase the linear stroke.
