WE

TCL LIGHTING

LED lighting industry leader

Over **20** years in lighting industry

More than **10,000** agents and distributors

Six core competences in professional lighting scope

Overseas business covers more than **80** countries and regions

Built the **First** State-level and CNAS approved laboratory in year 2006

Customized and **first**-time rapid response mechanism for professional services

Successfully provide lighting design and solution for more than **100,000** applications

The Creative Life

TCL is a globalized manufacturer of smart products and provider of internet application services. TCL Corporation was founded in 1981. Over the three decades, TCL has grown from a small joint venture producing audio tapes in Huizhou into a global corporation engaged in a wide range of businesses such as telephone, TV, mobile phone, refrigerator, washing machine, air-conditioner, smart health appliances and LCD panels.

TCL has 4 public-listed companies in Hong Kong and Shenzhen, and in the past years, TCL got several No.1 in different fields. TCL made the 1st hands-free elephone in China (1986), China's 1st 28inch TV(1993), the 1st Diamond cellphone(2000), the 1st Internet TV(2009 MiTV), and 1st 4K2K Full HD 110-inch 3D LCD TV(2012), it is also the largest one in the world, China's 1st Quantum Dot LCD TV(2014).Till now, the Brand Value of TCL is over 76 billion RMB(2018), it is also the No. 1 in TV industry in China.

TCL LED INDUSTRIAL PARK

ABOUT US

TCL Very Lighting Technology (Huizhou) Co., Ltd. is incorporated by 2 companies, Huizhou TCL Lighting Electrical Appliances Co., Ltd that was founded in 2000, and Very Light Source Technology CO., LTD that jointly established by TCL group and Refond Optoelectronics on 2011. TCL Very Lighting registered capital of 200 million RMB, it is a research, produce and sell of LED industry high-tech enterprises.

Based on the quality and technology accumulation of LED light source packaging, TCL Very Lighting planned LED full industry chain of "package + backlight module + application lighting" to create integrated LED industry chain advantages. Existing LED backlight, automotive lighting module, lighting fixtures and integrated wall & ceiling business, products have been covered light source, automotive lighting, commercial lighting, office lighting, residential lighting, outdoor lighting, integrated wall & ceiling and electrical appliances.

TCL Very Lighting has a modern LED industrial park, the factory adopts ten-thousand-level purification, constant temperature and humidity, anti-static electricity, advanced LED automation production machines, equipped with good software and hardware facilities, and strictly implement ISO 9001 management system, passed the third-party certification of CEPREI; with TCL Group intelligent application research results and its strong R&D strength, TCL very Lighting will devote itself to expanding the field of healthy lighting and intelligent application. The CNAS Lighting Laboratory, which is the first one who established in the industry, can produce nationally approved testing reports and be awarded titles of 'national green lighting education demonstration base' and 'development unit of LED energy efficiency standards'.

TCL Very Lighting has a professional and efficient marketing and design team, with 30 offices and nearly 2,000 marketing outlets nationwide. Its marketing service network covers large and medium-sized cities in China, and provides comprehensive, professional and fast action services for customers and users. It also provides intimate services in Europe, America, Middle East and Southeast Asia, and established stable customer cooperation and business service system.

It is based on the R&D of science and technology and the layout of full industrial chain, focusing on the development of LED health and intelligent lighting, innovative business model, strengthen market orientation, TCL Very lighting is striving to be a respected healthy and intelligent lighting leading enterprise, and will provide high-quality LED light source devices and LED application products and services, solutions for global users.

- 2000**, Huizhou TCL Light Electrical Appliances Co., Ltd (TCL Lighting) was established.
- 2004**, it won the title of "national high-tech enterprise"
- 2005**, it won the title of "national inspection exemption product"
- 2006**, TCL Lighting lab was accredited by CNAS, became the 1st Lighting manufacturer with National level lab in China.
- 2011**, Set up Huizhou Very Light Source Technology Co., LTD with holding share. Enter LED packaging field
- 2012**, TCL lighting was awarded "China green lighting education demonstration base".
- 2013**, TCL lighting increased its capital by RMB 50 million and registered capital by RMB 70 million.
- 2014**, Started strategic cooperation with EATON Cooper.
- 2017**, Very Light Source won the title of "national high-tech enterprise".
- 2018**, TCL Very Lighting Technology (Huizhou) Co., LTD set up , It is incorporated by TCL Lighting and Very Light Source company

Manufacture capacity

Full Industry Chain Competitive Advantage

TCL very lighting has its competitive advantage, it is the Full Industry Chain. TCL group has strong capability for electronic products and its supply chain, we can easily to get quality components with competitive price from current reliable suppliers. And also, we set up VERY Light Source company with holding share in 2013, that can make us to use own produced LED chips for most of our lighting products, we set up modern LED SMT chip packaging workshop, LED power supply manufacturing workshop and automatic LED assembly workshop to meet the needs of rapid development of LED.

With manufacture capability and reliable quality, delivery time and of course competitive price, full industry chain became one of our core competitiveness

Quality Control capacity

strict Quality System Management

We have a professional and strict QC team. With the strict Quality System Management, which contains SQA (Supplier Quality Assurance), IQC (Incoming Quality Check), PQC (Process Quality Check), FQC (Final Quality Check) & CSI (Customer Service Improvement), From raw materials to production, from production to factory inspection, every process is strictly in accordance with the quality management system of ISO 9001 ,and we got all the necessary certificates for relevant market.

Beautiful Light

Color temperature Consistency

TCL knows well the requirement for color temperature consistency for the quality lighting and also faces the phenomenon of inconsistency in terms of color temperature in market. It is a headache of designers and the consumers. For this purpose, TCL applies the LED chips at high consistency ($SDCM \leq 3$) from the quality chips manufacturers. All LED chips are sorted out, stored and processed in strict and scientific criterion to guarantee the LED chip in consistency in one batch.

In the study of color vision, MacAdam ellipses refer to the region on a chromaticity diagram which contains all colors which are indistinguishable, to the average human eye, from the color at the center of the ellipse. The contour of the ellipse therefore represents the just noticeable differences of chromaticity.

Procedure

MacAdam set up an experiment in which a trained observer viewed two different colors, at a fixed luminance of about 48 cd/m². One of the colors (the "test" color) was fixed, but the other was adjustable by the observer, and the observer was asked to adjust that color until it matched the test color. This match was, of course, not perfect, since the human eye, like any other instrument, has limited accuracy. It was found by MacAdam, however, that all of the matches made by the observer fell into an ellipse on the CIE 1931 chromaticity diagram. The measurements were made at 25 points on the chromaticity diagram, and it was found that the size and orientation of the ellipses on the diagram varied widely depending on the test color. These 25 ellipses measured by MacAdam, for a particular observer are shown on the chromaticity diagram above.

Extension to three dimensions

A more general concept is that of "discrimination ellipsoids" in the entire three-dimensional color space, which would include the ability of an observer to discriminate between two different luminances of the same color. Such measurements were carried out, among others, by Brown and MacAdam in 1949, Davidson in 1951, Brown in 1957, and by Wyszecki and Fielder in 1971. It was found that the discrimination ellipsoids yielded relatively unchanging discrimination ellipses in chromaticity space for luminances between 3 and 30 cd/m².

Effects in color theory

MacAdam's results confirmed earlier suspicions that color difference could be measured using a metric in a chromaticity space. A number of attempts have been made to define a color space which is not as distorted as the CIE XYZ space. The most notable of these are the CIELUV and CIELAB color spaces. Although both of these spaces are less distorted than the CIE XYZ space, they are not completely free of distortion. This means that the MacAdam ellipses become nearly (but not exactly) circular in these spaces.

Beautiful Light

COB (chip-on-board) which generates the light evenly over the surface.

COB (chip-on-board) generates the light evenly over the surface like that of incandescent lamp without double image. The light generated from the fitting with COB makes the subject look natural and clean while fitting with single-LED-chip has double image.

natural light

Fitting with COB generates the lights even and soft, making the subject natural and clean and consequently creating strong stereoscopic feel.

saw-toothed double light image

Fitting with single-LED-chip generates the lights from the scattered chips, making the subject blur and unclear in boundary with double image and consequently creating weak stereoscopic feel.

Advanced optical technology

TCL series are developed by adopting world top-class optics technology and processed in scientific and strict techniques to guarantee the optical quality of this series. Consequently, TCL series had accurate light distribution and high light output and even and soft light while no dark dot, dark area and halo.

Even light with natural halo

Uneven light with dark dot and area

Unclean boundary with stray and virtual image

Beautiful Light

High CRI

TCL series adopt world top class LED chip.
High color rendering with Ra > 90 makes the subject natural and fresh while few LED products can do so at present.
Lighting in high power & high CRI makes the subject outstand in color and material feature, and thus perfectly reflecting the colors of the subject and of human beings.
It is an idea lighting solution for the boutiques and important social activities places etc..

Beautiful Light

High quality means authentic lighting

An advanced professional lighting solution provides for “non-manipulative, authentic” illumination of goods and brands.
First-class colour rendering enhances any product’ s brilliance, harmonizing content and intention.
The advanced LED technology incorporated in TCL series produces the right light even for fine textures and materials.
TCL series adopts world-top COB and incorporates latest advanced technology to further enhance the light efficiency and perfect CRI.

Ra Evaluation Index is applied to estimate the color rendering index of the lighting product to see the reflection level of natural color compared to those by conventional lightings.

Gentle lighting for delicate goods

The LED light spectrum contains virtually no radiation in the infrared and ultraviolet regions, which can damage or fade sensitive goods while conventional halogen and HID light contains strong radiation in the infrared and ultraviolet. This means that, besides excellent lighting quality, TCL series also meets all the requirements for providing gentle lighting without having to use additional filters.
